Barcode Reader

Key Features:

- The barcode scanners consist of an internal decoder and a cable, which are connected to the computer through compatible ports.
- It consists of a light source, a lens and a photo conductor translating optical impulses into electrical ones.
- Additionally, nearly all barcode readers contain decoder circuit.
- It analyzes the barcode's image data provided by the photo conductor and sends the barcode's content to the scanner's output port.
- Advanced readers use laser-scanning technology.
- Barcode readers are available in several forms like in hand-held, hands-free, wearable, scan engines, laser or digital.
