# Contract Labor Management System

## Specifications :

**Contract Labour Management Solution** is a combination of readily available computer hardware, barcode readers, biometric fingerprint readers, webcams and the software. A typical installation consists of a server where database of all contract laborers is maintained. Clients in most cases will recover the cost of the solution within 3-6 months, especially where the labour strength is large. The following benefits are likely to accrue:

- The probability of payroll inflation by falsifying the records pertaining to the number of workers deployed, their committed hours and their skill gets totally eliminated.
- The client gets reports on the time spent by each labourer to enable accurate calculating of  billing for various contractors.
- It will ensure that the blacklisted workers do not get entry into the work area, even under different identity or through another contractor.
- Client can get warnings when a worker is nearing maximum number of days' attendance after which he will become eligible to various benefits which regular employees are entitled to.
- Labourers can be scheduled more accurately, thus minimizing the possibility of excess labour hiring.
- Clients can ensure that workers of the desired skill only get deployed.
